Hiring Manager
Media.net

Dear Hiring Manager,

I am excited to apply for a Software Developer/Programmer Analyst position at Media.net. As a final-year B.Tech student specializing in Information Technology at Sreenidhi Institute of Science and Technology, I have gained hands-on experience with real-world, large-scale applications through my internship at DBS Tech India and independent full-stack projects.

Over the past year, I have worked on key tools at DBS, including an Application Monitoring Tool that reduced developer debugging time by 10%, and a Retrofitting Tool that optimized legacy system upgrades by 20–30%. These projects helped me sharpen my skills in Java, Spring Boot, SQL, Angular, Git, and Maven, while also strengthening my understanding of Agile development and scalable backend systems.

Outside of my internship, I developed full-stack applications like Spring Vlogs, a microblogging platform built with Spring Boot, MySQL, and a responsive front-end using HTML, CSS, and JavaScript. I've also implemented CI/CD workflows using Jenkins and Docker and explored infrastructure-as-code through Terraform. These experiences have prepared me well for Media.net's high-performance, product-focused environment.

I am particularly drawn to Media.net's reputation for engineering excellence and its use of technologies like Java, distributed systems, and real-time performance optimization—areas I'm passionate about and eager to grow in.

Thank you for considering my application. I look forward to the opportunity to contribute to your team and to learn from the outstanding engineering talent at Media.net.

Sincerely,
Dharaneshwar Kalavena
